Skills

Software Development: Python, Java, C++, TypeScript (and JavaScript), HTML/CSS

Frameworks & Libraries: Flask, React.js, SQLAlchemy, Pandas, NumPy, Astro.js, Node.js, Express.js

Tools: Git, Docker, Kubernetes, Github, Netlify, Vercel, Linux, Prometheus, SonarQube, Grafana, Jenkins, CI/CD pipelines

Databases: PostgreSQL, MySQL, MongoDB

Experience

AI-ML Virtual Intern, Google – Virtual

April 2024-June 2024

- **Developed and refined object identification models** using **TensorFlow**, gaining hands-on experience in designing, training, and optimizing machine learning algorithms.
- Worked on **image recognition and computer vision tasks**, applying advanced AI/ML techniques to address real-world problems in a virtual team environment.
- **Collaborated on AI/ML projects**, demonstrating strong problem-solving skills, adaptability, and effective teamwork in a fast-paced, technology-driven environment.

Junior Developer Intern, SparkPlus Tech. – Remote

July 2025-July 2026

- **Maintained and enhanced the company's core platform**, ensuring high availability, performance, and reliability across production environments.
- **Designed and developed internal monitoring tools** to track website uptime, performance metrics, and system health for client-facing applications.
- **Implemented automated monitoring and alerting workflows** to proactively detect issues, reduce downtime, and improve operational stability.
- **Collaborated with team members** to deploy and manage live projects, continuously improving system efficiency and supporting active development initiatives.

Intern, Infosys Springboard – Virtual

November 2025-January 2026

- **Designed and developed an AI-powered chatbot** using **Streamlit and Ollama**, focused on assisting users with coding-related tasks.
- **Implemented OCR-based detection** to extract and process content from documents and images, enabling automated task handling and code-related interactions.
- **Collaborated within a structured internship environment** to design, build, and iterate on functional chatbot components and AI-powered features.

Trainee, Revature – Virtual

July 2026-September 2026

- **Completed hands-on training in Java and Python**, gaining practical experience in software development and problem-solving.
- **Worked with CI/CD and DevOps tools** including Jenkins, Docker, Kubernetes, Prometheus, and Grafana, with a focus on deployment, monitoring, and automation.
- **Successfully completed and passed all quality checks (QCs)** throughout the training, maintaining an **average score of 4/5** and demonstrating consistent technical performance and learning progress.

Projects

VistaraBI

React, Ollama, AI/ML, Open Source

- **Built VistaraBI**, an **open-source AI-powered Business Intelligence platform** designed to make data analysis and business insights more accessible.
- Implemented **domain and KPI detection** to automatically identify relevant business areas and key performance indicators from datasets.

- Developed AI-powered **analysis, recommendations, and forecasting** capabilities using **Ollama**, enabling users to uncover trends and generate actionable business insights.

Lawyer Booking & CRM Platform

Next.js, n8n, WhatsApp Automation, CRM

- **Built a complete lawyer booking and CRM platform** using **Next.js**, covering appointment management, client workflows, and operational tracking.
- Designed **n8n-powered workflow automations** to streamline booking and CRM processes, reducing manual intervention and improving operational efficiency.
- Implemented **WhatsApp-based confirmation and notification automations** to automatically communicate booking updates and confirmations with clients.

Futsal Booking Platform

Next.js, RBAC, Analytics, AI/ML

- **Developed a complete futsal booking platform** for **AIEM Goa** using **Next.js**, enabling users to discover, book, and manage futsal facilities through a streamlined web interface.
- Implemented **Role-Based Access Control (RBAC)** to provide tailored permissions and workflows for different user roles, improving platform security and administration.
- Integrated **analytics and AI-driven insights** to analyze booking activity, identify usage patterns, and support data-driven facility management.

PulseWatch

React, Express, PostgreSQL, Drizzle ORM, Node.js

- **Built a full-stack uptime monitoring platform** with configurable per-site checks, response-time tracking, incident logs, and uptime analytics across **24-hour, 7-day, and 30-day** periods.
- Implemented **automated monitoring and alerting** using **node-cron, PostgreSQL, and Drizzle ORM**, with email notifications for downtime and service recovery events.
- Designed a **production-ready architecture** combining an Express API, Vite-powered React dashboard, shared schemas, and optimized build pipelines for scalable deployment.

Track.now

Web Application, Product Development, Analytics

- **Built and launched Track.now**, taking the product from initial development through deployment and user adoption.
- Focused on **iterative product development and user experience improvements**, incorporating user feedback to continuously refine the platform.
- Grew the platform to **100+ users**, demonstrating successful product delivery, adoption, and independent execution from development to launch.

Stix 'N' Vibes

E-commerce, Next.js, WhatsApp Integration, Analytics

- **Architected a modular e-commerce platform** with scalable product, collection, and category data structures, enabling rapid customization and future expansion.
- Built a **material-aware cart and dynamic pricing system** supporting Paper and Vinyl products with configurable price multipliers and **WhatsApp-based checkout**.
- Designed extensible utilities for **discounts, popularity-based recommendations, analytics, and product management**, enabling continuous UI and feature iteration.

Amthane Valley

Next.js, Booking System, SEO, Deployment

- **Built a client-facing website** for **Amthane Valley** using **Next.js**, delivering a fast, SEO-optimized, and fully responsive user experience.
- **Developed a self-hosted booking platform** for farm activities, enabling customers to make direct reservations without relying on third-party booking services.
- Handled **end-to-end deployment, routing, and performance optimization**, ensuring a scalable, maintainable, and production-ready platform.

Education

Agnel Institute of Engineering and Management, Assagao, Goa - B.E. in Computer Engineering	2022-2026
Goa University, Goa - Honours Computer Engineering in Artificial Intelligence and Machine Learning	2023-2026
